

Advanced Composite Techniques

with Dr Jason Smithson

Unique 2-day course in UK

- Real life clinical scenario: treat three anterior teeth simultaneously on one model in real time
- Resin veneer for reconstruction of worn teeth, peg lateral and discoloured tooth
- Two-day intensive class: 75% hands-on with evidence based data.

Overview

Conventionally, discoloured teeth and advanced wear cases are treated with indirect restorations: crowns and veneers. This approach is well based in the literature and over time, has proven highly successful, however, in some cases it may prove expensive in terms of overall cost, treatment times and most critically loss of tooth structure.

This master class is designed to allow the experienced practitioner to confidently approach more challenging anterior cases with direct resin in combination with a sound understanding of functional occlusion.

What you will learn:

- A simple approach to the direct resin veneer: create masterpieces easily and predictably
- How to handle the peg lateral and microdont teeth
- Functional smile design
- How to handle complex cases such as discoloured and misaligned teeth with direct resin in conjunction with simple predictable home whitening
- An intuitive approach to reconstruct worn broken down teeth creating functional occlusions with direct resin. To include increasing the vertical dimension and re-establishing anterior guidance.

Hands-on component:

The practical class is a natural partner to the presentation: all aspects will be covered on a single typodont model in a user-friendly manner, which is applicable to the General Practitioner and Specialist alike. Dr Smithson throughout will carry out each exercise in a stage-by-stage 'Follow my Leader' fashion with close support.

The approach is casual and delegates are encouraged to ask questions as they work.

Learning Objectives:

- The Resin Veneer for the discoloured tooth (lateral incisor)
- Reconstruction of the worn tooth (Central Incisor)
- The Peg Lateral Incisor

Jason Smithson bio

BDS DipRestDent RCS (Eng)

Qualified at the Royal London Hospital in 1995; achieving a number of awards including The Constance Klein Memorial, The Stafford Millar, and The Malcolm Jenkins Scholarships, The American Association of Endodontics Prize and the Overall Award for Clinical Dentistry.

After spending three years in academic hospital practice in London, he relocated to Cornwall where he now practices Aesthetic and Restorative Dentistry exclusively. He has a specific interest in composite resin artistry and has published several papers in journals both nationally and internationally. He has recently lectured to dentists in the UK and the USA on the subject of direct resins. He is a full member of the British Academy of Cosmetic Dentistry and The Society for Advancement of Anaesthesia in Dentistry. Jason is Chairman of The Cornwall Independent Practitioners Group: one of the largest independent study groups in the UK. He is currently working towards an MSc and FFGDP.
